

## Enterprise is the World's Most Valuable Car Rental Brand

Every year, leading valuation and strategy consultancy [Brand Finance](#) values the brands of thousands of the world's biggest companies. Brands are first evaluated to determine their power / strength (based on factors such as marketing investment, familiarity, loyalty, staff satisfaction and corporate reputation) and given a corresponding letter grade up to AAA+. Brand strength is used to determine what proportion of a business's revenue is contributed by the brand, which is projected into perpetuity to determine the brand's value. The world's most valuable car rental services brands are ranked and included in the Brand Finance Car Rental Services 10.

Enterprise retains its title as the world's most valuable car rental service brand, its value increasing 22% to US\$5.3 billion this year. Enterprise is rapidly expanding its capacity and its geographical reach with store openings in multiple locations across Latin America and the Middle East. Total fleet size increased by 55% year-on-year, yet Enterprise was able to sustain this ambitious expansion, with utilisation holding steady at 71%. The brand emerged as the definitive leader at the recent Travvy Awards, winning multiple golds including for Best Car Rentals Overall.

Second-placed Hertz has increased its brand value by 5% to US\$2.3 billion. Sixt is the industry's fastest growing brand, up 54% to US\$357 million. Revenues increased 14.6% year-on-year to EUR1.15 billion in the first half of 2016. The growth is primarily due to a strong demand from commercial, corporate and private clients alongside improvements to sales and marketing activities. Like Enterprise, it is expanding rapidly, opening approximately 60 locations in the first half of 2016.

### About Brand Finance

[Brand Finance](#) is the world's leading brand valuation and strategy consultancy, with offices in over 15 countries. We provide clarity to marketers, brand owners and investors by quantifying the

# Brand Finance®

financial value of brands. Drawing on expertise in strategy, branding, market research, visual identity, finance, tax and intellectual property, Brand Finance helps clients make the right decisions to maximise brand and business value and bridges the gap between marketing and finance.

## **Methodology**

### *Definition of Brand*

When looking at brands as business assets that can be bought, sold and licensed, a technical definition is required. Brand Finance helped to craft the internationally recognised standard on Brand Valuation, ISO 10668. That defines a brand as “a marketing-related intangible asset including, but not limited to, names, terms, signs, symbols, logos and designs, or a combination of these, intended to identify goods, services or entities, or a combination of these, creating distinctive images and associations in the minds of stakeholders, thereby generating economic benefits/value.”

However, a brand makes a contribution to a company beyond that which can be sold to a third party. ‘Brand Contribution’ refers to the total economic benefit that a business derives from its brand, from volume and price premiums over generic products to cost savings over less well-branded competitors.

### *Brand Strength*

Brand Strength is the part of our analysis most directly and easily influenced by those responsible for marketing and brand management. In order to determine the strength of a brand we have developed the Brand Strength Index (BSI). We analyse marketing investment, brand equity (the goodwill accumulated with customers, staff and other stakeholders) and finally the impact of those on business performance. Following this analysis, each brand is assigned a BSI score out of 100, which is fed into the brand value calculation. Based on the score, each brand in the league table is assigned a rating between AAA+ and D in a format similar to a credit rating. AAA+ brands are exceptionally strong and well managed while a failing brand would be assigned a D grade.

### *Approach*

Brand Finance calculates the values of the brands in its league tables using the ‘Royalty Relief approach’. This approach involves estimating the likely future sales that are attributable to a brand and calculating a royalty rate that would be charged for the use of the brand, i.e. what the owner would have to pay for the use of the brand—assuming it were not already owned.

The steps in this process are as follows:

- 1 Calculate brand strength on a scale of 0 to 100 based on a number of attributes such as emotional connection, financial performance and sustainability, among others. This score is known as the Brand Strength Index, and is calculated using brand data from the BrandAsset® Valuator database, the world’s largest database of brands, which measures brand equity, consideration and emotional imagery attributes to assess brand personality in a category agnostic manner.

# Brand Finance<sup>®</sup>

2 Determine the royalty rate range for the respective brand sectors. This is done by reviewing comparable licensing agreements sourced from Brand Finance's extensive database of license agreements and other online databases.

3 Calculate royalty rate. The brand strength score is applied to the royalty rate range to arrive at a royalty rate. For example, if the royalty rate range in a brand's sector is 0-5% and a brand has a brand strength score of 80 out of 100, then an appropriate royalty rate for the use of this brand in the given sector will be 4%.

4 Determine brand specific revenues estimating a proportion of parent company revenues attributable to a specific brand.

5 Determine forecast brand specific revenues using a function of historic revenues, equity analyst forecasts and economic growth rates.

6 Apply the royalty rate to the forecast revenues to derive brand revenues.

7 Brand revenues are discounted post tax to a net present value which equals the brand value.
